Factory automation – Electronics assembly lines

Electronic products like smartphones or monitors are built in fully automatized lines. The complexity of the product requires a reliable process to grant a constant quality of the final product, across the different assembly operations.

CASM-25 electric cylinders can be used to automatize horizontal or vertical axis on quality inspection stations, normally used in processes like smartphones camera or speaker quality checks. Thanks to their small dimension and precise positioning, they can effectively be used as plug and play positioning capability solutions.

Ordering key

Linear unit

C A S M - **2 5** - **B S** - **0 0 0**

Screw _____
